

CLAIMS

1. A polyol curable fluororubber composition, comprising 100 parts by weight of a fluororubber, 6 to 15 parts by weight of magnesium oxide, 0.5 to 5 parts by weight of a hydrotalcite group compound and 20 to 55 parts by weight of a mixture of thermal black and a bituminous coal filler.

2. The polyol curable fluororubber composition according to Claim 1, wherein the fluororubber is a vinylidene fluoride-hexafluoropropene-based copolymerized rubber.

3. The polyol curable fluororubber composition according to Claim 1 or 2, wherein the mixing weight ratio of thermal black to bituminous coal filler is 10/90 to 90/10.

4. A cured fluororubber formed article which is produced by forming and curing the polyol curable fluororubber composition according to any of Claims 1 to 3, in the presence of a polyol curing agent, and then subjecting the cured formed product to a stepwise temperature elevation treatment in a temperature range of 100°C to 300°C.

5. A method of producing a cured fluororubber formed article, comprising the steps of forming and curing the polyol curable fluororubber composition according to any of Claims 1 to 3, in the presence of a polyol curing agent, and then subjecting the cured formed product to a stepwise temperature elevation treatment in a temperature range of 100°C to 300°C.
